EDUCATION AND TRAINING

Leeds Beckett University, Leeds (Begins September 2026)

Master of Science (MSc) in Advanced Computer Science

Covenant University, Ota

Bachelor of Science (BSc) in Management Information Systems

Robotics and Artificial Intelligence Nigeria

Key Modules: Deep learning, Machine Learning, NLP, Data Science and Visualisation with Python and Tableau

DataTalks Data Engineering Zoomcamp

Jan 2024 - March 2024

Completed intensive 9-week course on building production-ready data pipelines

Core Modules

- Containerization and Infrastructure as Code (Docker, Terraform), Workflow Orchestration, Data Warehousing (BigQuery), Analytics Engineering (dbt), Batch Processing (Apache Spark), Stream Processing (Kafka)

RESEARCH EXPERIENCE

AI Safety Camp

Jan 2026 - April 2026

Research

- Researching recruitment-based collusion dynamics in multi-agent oversight systems, focusing on mechanisms by which AI agents might coordinate to corrupt aligned models and circumvent safety measures.
- Designed social dilemma environments and evaluations to observe, log, and track emergent collusive behavior in multi-agent systems

Algoverse AI Research

Oct 2025 - Jan 2026

Co-Author & Research Engineer

- Implemented asynchronous batch processing pipelines using LLM-as-judge methodology for large-scale evaluation of bias patterns and trolling recognition, enabling cost-efficient analysis of massive interaction datasets.
- Performed toxicity analysis of AI assistant responses using ML classification models, processing hundreds of thousands of interactions through batch inference pipelines.
- Designed reproducible analysis infrastructure with asynchronous batch processing for scalable experimentation, enabling efficient analysis of million-scale conversational data.
- Paper in Review at NEURIPS 2026: <https://arxiv.org/pdf/2602.21236>
- Dataset: <https://huggingface.co/datasets/bercev/GrokSet>

Apart AI Forecasting Hackathon

Oct 2026

Researcher

- Engineered data preprocessing for AI automation forecasting model, integrating O*NET occupational skill requirements database with AI capability benchmark scores to predict labor market impacts in India and Nigeria.
- Performed data normalization and merging operations to align occupational skill profiles with AI capability trajectories and job classification taxonomies.
- Contributed to probabilistic forecasting system assessing future AI-driven job automation timelines through multi-source data fusion (O*NET, AI benchmarks, GDELT policy signals).
- Project: [Simulating Automation Timelines Through Labor-Capability Modeling](#)

WORK EXPERIENCE

Axel Cyber LLC - Lagos, Nigeria

October 2024 - July 2025

Software Engineer

- Integrated real-time speech and video analysis pipeline into existing WebSocket architecture, implementing MediaPipe posture detection and audio processing logic that achieves <3 second analysis latency for enterprise presentation analytics platform.
- Developed REST APIs serving user session analytics data with Django, enabling seamless frontend integration and efficient data handling for presentation performance metrics.
- Built automated lead enrichment pipeline using multi-threaded web scraping, processing company websites and storing structured data outputs from OpenAI API calls for client prospecting workflows.

Upwork (Freelance)

December 2024 - May 2025

Data Engineer

- Architected multi-source cryptocurrency analytics pipeline using Dagster, ingesting OHLCV data from Birdeye API and on-chain wallet transactions from Dune Analytics, processing 50K+ daily blockchain records with DuckDB and storing partitioned datasets in DeltaLake on Cloudflare R2 for downstream algorithmic trading execution.
- Engineered SQL queries across Dune's decentralized exchange schema, aggregating transaction data from 15+ Solana DEX tables then productionized queries as APIs enabling top-performing wallet identification for copytrading features.
- Implemented time-series data partitioning strategy (1-minute to 1-month resolutions) in DeltaLake, reducing query latency for backtesting pipelines and enabling efficient historical analysis of trading strategies across multiple timeframes.

LemFi - Lagos, Nigeria

Mar 2023 - Mar 2024

Data Engineer - Internship

- Designed and built production ETL pipeline connecting Google Ads API to BigQuery, aggregating 15+ advertising tables into unified cost-reporting schema enabling daily automated syncs that replaced manual weekly data exports for the marketing team.
- Developed Dagster pipeline processing daily NGN-USD exchange rate data with alerting and Streamlit visualizations, serving as proof-of-concept that led to company-wide adoption of Dagster for data orchestration (still in use as of today).

OPEN SOURCE PROJECTS

[EvalEval](#)

- Built analysis pipeline reading remote HuggingFace parquet datasets, validating and ingesting them into DuckDB with dynamic schema resolution to generate summary statistics and visualisations across LLM evaluation benchmarks.
- Contributed to the project documentation site using Jekyll and Just the Docs (https://evalevalai.com/every_eval_ever/).

[Kwcoco](#)

- Added inline type annotations across a large Python codebase, improving static analysis coverage with mypy/ty integration.

[Tweet Audit Pipeline](#)

- Implemented high-performance parallel tweet auditing system using Google Gemini Batch API, processing 3,000 tweets in <5 minutes (40x faster than sequential processing) through intelligent chunking and automated result merging across worker threads.

[NBA Data Pipeline](#)

- Constructed end-to-end analytics pipeline using Dagster orchestration, scraping NBA statistics with BeautifulSoup, transforming data with dbt, loading to BigQuery, and delivering interactive Tableau dashboards visualizing player performance metrics—featured in Dagster's official **Awesome Projects** GitHub repository.
